**CASH MANAGEMENT PLAN OF THE CARNEYS POINT TOWNSHIP SEWERAGE AUTHORITY
IN THE COUNTY OF SALEM, NEW JERSEY**

I. Statement of Purposes

This Cash Management Plan (the "Plan") is prepared pursuant to the provisions of N.J.S.A. 40A:5-14 in order to set forth the basis for the deposits ("Deposits") and investment ("Permitted Investments") of certain public funds of the Carneys Point Township Sewerage Authority, pending the use of such funds for the intended purposes. The Plan is intended to assure that all public funds identified herein are deposited in interest bearing Deposits or otherwise invested in Permitted Investments hereinafter referred to. The intent of the Plan is to provide that the decisions made with regard to the Deposits and the Permitted Investments will be done to ensure the safety, the liquidity (regarding its availability for the intended purposes), and the maximum investment return within such limits. The Plan is intended to ensure that any Deposit or Permitted Investment matures within the time period that approximates the prospective need for the funds deposited or invested so that there is not a risk to the market value of such Deposits or Permitted Investments.

II. Cash Management Policy

Objectives:

The Priority of Investing policies shall be in order of descending importance: security, liquidity and yield.

- a. Security: The safety of principal is the foremost objective of the cash management plan. Investments shall be undertaken in a manner that seeks to ensure the preservation of capital in the overall portfolio. The objective is to mitigate credit risk and interest rate risk.
 - i. Credit Risk: Credit Risk is the risk of loss due to failure of the security issuer or backer. Credit risk may be mitigated by:
 1. Limiting Investments to the safest types of securities
 2. Pre-qualifying the financial institutions, broker/dealers, intermediaries and advisors with which an entity will do business.
 3. Diversifying the investment portfolio so that potential losses on individual securities will be minimized.
 - ii. Interest Rate Risk: Interest Rate Risk is the risk that the market value of the securities in the portfolio will fall due to changes in general interest rates. Interest Rate Risk may be mitigated by:
 1. Structuring the investment portfolio so that securities mature to meet cash requirements for ongoing operations, thereby avoiding the need to sell securities on the open market prior to maturity, and
 2. By investing operating funds primarily in shorter-term securities.
- b. Liquidity: The investment portfolio must remain sufficiently liquid to meet all cash requirements of the Authority. The portfolio should be structured so that the securities mature concurrent with cash needs to meet anticipated demands (static liquidity). Furthermore, since all possible cash demands cannot be anticipated, the portfolio should consist largely of securities with active secondary or resale markets (dynamic liquidity).

III. Cash Management Policy (Continued)

- c. Yield: The investment portfolio must be designed with the objective of attaining a market rate of return throughout budgetary and economic cycles, taking into account the investment risk constraints and liquidity needs. Return on investment is of least importance compared to the safety and liquidity objective described above. The core of investments is limited to relatively low risk securities in anticipation of earning a fair return relative to the risk being assumed. The Chief Financial Officer shall carefully evaluate any investment offering above market yields. Securities shall not be sold prior to maturity with the following exceptions:
 - i. A declining credit security could be sold early to minimize the loss of principal.
 - ii. A security swap would improve the quality, yield, or target duration in the portfolio.
 - iii. Liquidity needs of the local unit require that the security be sold.
